

PO & Invoice Tracking System

Developer Handoff — Wireframes, Field Specs, State Transitions

Version 0.1 · 5 May 2026

Region / tax assumption: India (GST + TDS).

Contents

1. System overview

This system tracks the full chain of trade documents on both sides of the business:

- Receivables (client side): Client PO received → one or more client invoices raised → receipts (with TDS deducted by the client)
- Payables (vendor side): Vendor PO issued by us → one or more vendor invoices received → payments made (with TDS deducted at source by us)
- A vendor PO can optionally be linked to a client PO so margin and cash position roll up per PO chain (PO Profitability report)
- Adjustments: credit notes (issued to clients to reduce a previously raised invoice) and debit notes (issued to vendors to reduce a previously received vendor invoice)
- Vendor advances: payments made before an invoice is received, with TDS deducted at advance stage and netted on final invoice

1.1 Domain entities (cardinality)

Parent	Child	Cardinality	Notes
Client	Client PO	1 : N	Each client can have many POs
Client PO	Client invoice	1 : N	Multiple invoices per PO; each invoice references PO line(s)
Client invoice	Client receipt allocation	1 : N	A receipt may be split across multiple invoices
Client invoice	Credit note	1 : N	Reduces invoice value; issued post-supply
Vendor	Vendor PO	1 : N	Each vendor can have many POs from us
Client PO	Vendor PO	1 : N (optional)	Vendor PO may be linked to a client PO for margin tracking
Vendor PO	Vendor invoice	1 : N	Vendor may invoice us in multiple parts
Vendor invoice	Payment allocation	1 : N	A payment may cover multiple vendor invoices
Vendor invoice	Debit note	1 : N	We issue to vendor to reduce previously-received invoice
Vendor	Vendor advance	1 : N	Paid before invoice; adjusted later

1.2 Status state machines (high-level)

Client PO

Draft → Open → Partially invoiced → Fully invoiced → Closed (or Cancelled at any pre-invoiced stage)

Client invoice

Draft → Issued (Open) → Partially paid → Paid (or Overdue if past due date and unpaid) → Cancelled (only if no payment applied)

Vendor PO

Draft → Pending approval → Approved (Open) → Partially received → Fully received → Closed

Vendor invoice

Pending match → Matched → Approved → Partially paid → Paid (or Disputed)

Vendor advance

Open (unadjusted) → Partially adjusted → Fully adjusted → Closed (or Refund pending if PO cancelled)

1.3 Cross-cutting business rules

- TDS section is set per vendor (master data). The system auto-computes TDS on payment / advance using that section's rate.
- GST treatment (intra-state vs. inter-state) is derived from supplier state vs. place of supply; system suggests but allows override.
- Linking a vendor PO to a client PO is optional but unlocks the PO Profitability report.
- Three-way match (PO ↔ GRN ↔ vendor invoice) is enforced before vendor invoice can be approved; tolerance configurable per category.
- A client invoice cannot be cancelled once any payment has been applied; use a credit note instead.
- Numbering series are configurable per FY for Client PO, Client invoice, Vendor PO, Vendor invoice (record), Receipt, Payment, Advance, CN, DN.
- All amounts stored in INR base currency; if PO is in foreign currency, FX rate captured at invoice date and re-evaluated on payment date.

2. Receivables (client side)

2.1 Dashboard

Screen ID: *dashboard* · Nav path: *Overview > Dashboard*

Purpose

Single-glance snapshot of cash position, tax liability, and recent activity.

Fields

Field	Type	Req	Default / Source	Validation
Outstanding receivable	KPI (currency)		Sum of open client invoice balances (Total – Received – TDS adjusted)	Computed live; clickable → AR aging
Outstanding payable	KPI (currency)		Sum of open vendor invoice balances net of paid	Clickable → AP aging
TDS receivable (FY)	KPI (currency)		Σ TDS deducted by clients on receipts in current FY	Reconciles against 26AS import
TDS deducted & payable	KPI (currency)		Σ TDS deducted by us on vendor payments awaiting challan deposit	Highlight red if past 7th of next month
AR aging buckets	Bar chart		0-30 / 31-60 / 61-90 / 90+	Per-bucket click drills to filtered AR list
AP aging buckets	Bar chart		Same buckets as AR	Per-bucket click drills to filtered AP list
Recent activity	Activity feed (last 20)		Mixed: PO received, invoice raised, payment received, vendor invoice received, payment made	Each row links to source document

Actions & buttons

Button / action	Effect
Search (top bar)	Global fuzzy search across PO #, invoice #, client/vendor name, GSTIN
+ New	Quick-create menu: PO (client/vendor), Invoice (client/vendor), Receipt, Payment

Notes

- Refresh interval: server-side cached for 60s; manual refresh button on each KPI card.
- Permission: visible to Finance, Owners. Sales role sees only AR-side cards.

2.2 Clients — list

Screen ID: *clients* · Nav path: *Receivables > Clients*

Purpose

Master list of all clients (parties from whom you receive POs).

Fields

Field	Type	Req	Default / Source	Validation
Client name	String	Y		Unique within tenant; max 120 chars
GSTIN	String (15)			Regex GSTIN; checksum verified; lookup via GST search if

Field	Type	Req	Default / Source	Validation
				available
PAN	String (10)			Regex PAN; auto-derived from GSTIN if provided
State / Place of supply	Dropdown			State code drives intra/inter-state GST default
Open POs	Computed int		Count where status ∈ {Open, Partial}	
Open invoices	Computed int		Count where balance > 0	
Outstanding	Computed currency		Σ open invoice balances	
Last activity	Date		Max(date) across PO, invoice, receipt for this client	

Actions & buttons

Button / action	Effect
+ Add client	Open client master form (separate, not in scope for this wireframe set)
Row click	Drill into client 360° page with all POs, invoices, receipts

2.3 Client POs — list

Screen ID: *client-pos* · Nav path: *Receivables > Client POs*

Purpose

All purchase orders received from clients; drives invoicing.

Fields

Field	Type	Req	Default / Source	Validation
PO #	String			System-generated, prefix configurable per FY
Client	FK Client	Y		
PO date	Date	Y		
PO value	Currency (incl. GST)	Y		> 0
Invoiced (Σ)	Computed		Σ all invoice totals against this PO	
Balance	Computed		PO value – Invoiced	
Invoicing progress	Progress bar		Invoiced / PO value	
Status	Enum		Auto-derived from balance & dates: Open / Partial / Fully invoiced / Closed	

Actions & buttons

Button / action	Effect
Filter (status, client, date range)	Server-side filter, persisted in URL
+ Receive PO	Opens New Client PO form (§2.5)
Row click	Opens Client PO detail (§2.4)

Button / action	Effect
Bulk export CSV	Server-rendered CSV with currently applied filter

2.4 Client PO — detail

Screen ID: *client-po-detail* · Nav path: *Receivables > Client POs > Detail*

Purpose

Single PO view with line items, all invoices raised against it, receipts, and linked vendor POs.

Fields

Field	Type	Req	Default / Source	Validation
PO meta strip	Read-only summary		PO value, Invoiced, Balance, Received, Delivery date, Payment terms, GST treatment, Status	
Line items grid	Table		Per line: Description, HSN/SAC, Qty, Rate, Amount, Already invoiced, Balance to invoice	Balance $\geq$ 0 enforced; over-invoicing requires owner override
Invoices tab	List		All invoices linked to this PO with Total, Received, TDS, Status	
Payments tab	List		Receipts allocated to invoices of this PO	
Linked vendor POs tab	List		Vendor POs whose linkedClientPoid = this PO	
Files & notes	Attachments + free-text notes			PDF/JPG/PNG, max 25 MB per file

Actions & buttons

Button / action	Effect
Edit	Open PO in edit mode; restricted if any invoice exists (only metadata fields editable)
Upload PO PDF	Stores in attachments; preview on hover
+ Raise invoice against this PO	Opens New Client Invoice form (\$2.7) pre-filled with PO + balance lines
Cancel PO	Allowed only if no invoice raised. Sets status = Cancelled and freezes the record

State transitions

From state	Event / trigger	To state	Side effects
Open	First invoice raised	Partial	progress bar updates
Partial	Final invoice raised (balance = 0)	Fully invoiced	
Fully invoiced	All invoices paid	Closed	PO archived after 90 days
Open / Partial	Cancel PO	Cancelled	PO frozen; no further invoices allowed

2.5 New Client PO — form

Screen ID: *form-client-po* · Nav path: *Receivables > + New client PO*

Purpose

Capture a PO received from a client.

Fields

Field	Type	Req	Default / Source	Validation
Client	FK Client	Y	Type-ahead; allow inline + Add new client	
Client's PO ref	String	Y		Unique within client; max 60 chars
Our PO #	String		Auto-generated: PO-CL-NNNN	Locked; sequence per FY
PO date	Date	Y		≤ today
Expected delivery	Date			≥ PO date
Payment terms	Enum		Inherit from client master; override allowed	
Currency	Enum		INR	If non-INR, FX rate captured per invoice
GST treatment	Enum	Y	Auto from client state vs. our state	Inter-state IGST / Intra-state CGST+SGST / Export / Export under LUT / SEZ
Place of supply	State		Auto from client	Required if GST treatment ∈ {IGST, CGST+SGST}
Attach PO PDF	File			Single PDF, ≤ 25 MB
Line items grid	Editable table	Y		≥ 1 line; per line: Description, HSN/SAC, Qty > 0, Rate ≥ 0, GST% from list
Notes / T&C	Long text			Max 4000 chars
Totals	Computed		Σ taxable, Σ GST (split CGST/SGST or IGST), Round-off, PO total	

Actions & buttons

Button / action	Effect
Cancel	Discard; if dirty, confirm dialog
Save as draft	Status = Draft; no number assigned until issue
Save & receive	Status = Open; PO # finalised; appears in PO list and Dashboard activity

State transitions

From state	Event / trigger	To state	Side effects
(new)	Save as draft	Draft	No number assignment
Draft	Save & receive	Open	PO # assigned; visible to all roles

Notes

- Validation: HSN/SAC must be 4, 6, or 8 digits; mandatory if turnover > ₹5cr (config flag).
- If GST treatment changes between intra/inter, the GST split column rebuilds and totals re-compute.

2.6 Client Invoices — list

Screen ID: client-invoices · Nav path: Receivables > Client Invoices

Purpose

All invoices raised to clients across POs.

Fields

Field	Type	Req	Default / Source	Validation
Invoice #	String			Sequenced per series per FY
Date	Date			
Due date	Date		Date + payment-terms days; editable	
Client / PO #	FK / FK			Both required
Taxable / GST / Total	Currency		Computed from lines	
Received / TDS / Balance	Currency		Computed from receipt allocations	
Status	Enum		Draft / Open / Partial / Paid / Overdue / Cancelled	

Actions & buttons

Button / action	Effect
Filters (status, client, FY)	Server-side filter; default = current FY, status ≠ Cancelled
+ New invoice	Opens New Client Invoice form (\$2.7)
Row click	Opens Client Invoice detail (\$2.7b)
Bulk send to clients	Selects open invoices, dispatches PDF email; logs activity

2.7 Client Invoice — detail

Screen ID: *client-invoice-detail* · Nav path: *Receivables > Client Invoices > Detail*

Purpose

View an issued invoice; record payment and view activity.

Fields

Field	Type	Req	Default / Source	Validation
Header strip	Read-only		Invoice total, Received, TDS, Balance, Due, Linked PO	
Line items	Read-only table		Per line: HSN, qty, rate, taxable, CGST/SGST/IGST, total	
Payments & deductions	Sub-table		Date, receipt #, mode, gross, TDS, charges, net, UTR	
Activity log	Audit trail		Auto-generated: created, emailed, payment matched, etc.	

Actions & buttons

Button / action	Effect
Download PDF	Renders tax invoice with QR / IRN if e-invoice enabled

Button / action	Effect
Send to client	Email to client AP contact; log delivery; track opens (optional)
+ Record payment	Opens Record Receipt form (\$2.9) prefilled with this invoice
Cancel invoice	Allowed only if no payment applied; status = Cancelled; reversed in GSTR-1 via amendment

2.7b New Client Invoice — form

Screen ID: form-client-invoice · Nav path: Receivables > + New invoice

Purpose

Raise an invoice against a client PO. Multiple invoices may be raised against one PO.

Fields

Field	Type	Req	Default / Source	Validation
Client	FK Client	Y	Inherit from PO if pre-filled	
Linked client PO	FK PO	Y		Must be Open / Partial; locks once invoice issued
Invoice #	String		Auto-generated INV-CL-NNNN	Locked
Invoice date	Date	Y		≤ today; ≥ PO date
Due date	Date		Computed = Invoice date + PO payment-terms days	
Place of supply	State		From PO; override allowed	
Reverse charge?	Boolean		No	
e-Invoice / IRN	Enum		Auto if turnover > threshold; else Skip	
Lines (pulled from PO)	Editable grid			Per line: Bill-now qty ≤ PO qty – already-billed; ≥ 1 line must have qty > 0
Custom lines	Allowed but flagged			Owner override required for non-PO lines
Bank account	FK Bank	Y	Default operating account	
Notes / payment instructions	Long text			
Totals	Computed		Taxable, GST split, round-off, total	

Actions & buttons

Button / action	Effect
Cancel	Discard with dirty-confirm
Save draft	Status = Draft
Issue & email	Validate → assign IRN if applicable → status = Open → PDF emailed to client
↻ Refresh from PO	Re-pulls latest balance qties from PO (in case PO was edited)

State transitions

From state	Event / trigger	To state	Side effects
Draft	Issue & email	Open	PO balance reduced; activity logged on both PO and invoice

2.8 Client Payments (Receipts) — list

Screen ID: *client-payments* · Nav path: *Receivables > Client Payments*

Purpose

All money received from clients with TDS captured.

Fields

Field	Type	Req	Default / Source	Validation
Receipt #	String			Sequenced per FY
Date / Mode	Date / Enum			Mode ∈ {NEFT, RTGS, UPI, Cheque, Wire}
Client / Invoice(s)	FK		Allocations link receipt to one or more invoices	
Gross / TDS / Charges / Net	Currency			Net = Gross – TDS – Charges; auto-computed
UTR / Cheque #	String			Required if mode ∈ {NEFT, RTGS, UPI}; uniqueness check warns on duplicate

Actions & buttons

Button / action	Effect
+ Record receipt	Opens Record Receipt form (\$2.9)
Auto-match (bank import)	Optional bank statement import matches by UTR; un-matched listed as Unallocated
Export	CSV / Tally / Zoho format

2.9 Record Client Receipt — form

Screen ID: *form-client-receipt* · Nav path: *Receivables > + Record receipt*

Purpose

Capture money received and any TDS deducted by the client at source.

Fields

Field	Type	Req	Default / Source	Validation
Client	FK	Y		
Receipt #	String		Auto RCT-YYYY-NNN	
Date	Date	Y		≤ today
Mode	Enum	Y		
Bank account credited	FK Bank	Y		
UTR / Cheque #	String			Required for electronic modes
Gross amount	Currency	Y		> 0

Field	Type	Req	Default / Source	Validation
TDS deducted by client	Currency		0	≥ 0 ; if > 0 , TDS section required
Bank charges	Currency		0	
Net received (auto)	Currency		Gross – TDS – Charges	Read-only; must equal bank credit
TDS section	Enum			Required if TDS > 0 ; $\in \{194C, 194J, 194Q, \dots\}$
TDS certificate received?	Enum		Pending	
Allocations grid	Editable	Y		$\Sigma \text{ Apply} \leq \text{Gross}$; per row $\text{Apply} \leq \text{invoice outstanding}$

Actions & buttons

Button / action	Effect
Cancel	Discard
Save receipt	Posts receipt + allocations; reduces invoice balances; TDS posts to TDS Receivable ledger; un-allocated remainder stays as advance receipt

State transitions

From state	Event / trigger	To state	Side effects
Invoice = Open	Allocation made	Partial / Paid	Status auto-updates
Receipt with un-allocated	Save	Receipt with advance balance	Visible as "Unallocated" in client account; can be applied later

2.10 Credit Notes — list

Screen ID: credit-notes · Nav path: Receivables > Credit Notes

Purpose

Credit notes issued to clients to reduce previously-raised invoices.

Fields

Field	Type	Req	Default / Source	Validation
CN #	String			Sequenced per FY
Date	Date			
Client / Original invoice	FK / FK			Original invoice must exist
Reason	Enum			$\in \{\text{Sales return, Rate correction, Post-supply discount, Cancellation, Quality issue}\}$
Taxable reversed / GST reversed / Total	Currency			
GSTR-1 status	Enum		Pending / Filed / Amended	
Application status	Enum		Issued / Applied / Refunded	

Actions & buttons

Button / action	Effect
+ New credit note	Opens form (§2.11)

2.11 New Credit Note — form

Screen ID: form-credit-note · Nav path: Receivables › + New credit note

Purpose

Issue a credit note to a client.

Fields

Field	Type	Req	Default / Source	Validation
Client	FK	Y		
Original invoice	FK Invoice	Y		Must belong to selected client; status ≠ Cancelled
CN #	String		Auto CN-CL-NNNN	
Date	Date	Y		
Reason	Enum	Y		
Reason details	String			
Lines to credit	Editable grid	Y		Per line: Credit amt ≤ original line amt – already credited; ≥ 1 line with amt > 0
Apply to invoice balance	Enum		Yes — auto-reduce; or No — issue refund	
e-Invoice IRN	Enum		Yes if e-invoicing enabled	

Actions & buttons

Button / action	Effect
Save draft	Status = Draft
Issue & email	Validates → IRN issued → invoice balance reduced → emailed to client AP → flagged for GSTR-1

State transitions

From state	Event / trigger	To state	Side effects
Invoice balance = X	CN issued for amount Y	Invoice balance = X – Y	If Y > balance, residual stored as advance/refund liability

3. Payables (vendor side)

3.1 Vendors — list

Screen ID: vendors · Nav path: Payables > Vendors

Purpose

Master list of all vendors (parties to whom you issue POs).

Fields

Field	Type	Req	Default / Source	Validation
Vendor name	String	Y		
GSTIN / PAN	String			GSTIN regex; PAN required if no GSTIN (composition / unregistered)
TDS section	Enum	Y	∈ {194C, 194J, 194Q, 194I, ...}	Drives auto-TDS on payment
Open POs / Open invoices / Outstanding	Computed			
Last activity	Date			

Actions & buttons

Button / action	Effect
+ Add vendor	Opens vendor master (separate scope)
Row click	Vendor 360°

3.2 Vendor POs — list

Screen ID: vendor-pos · Nav path: Payables > Vendor POs

Purpose

POs you have issued to vendors.

Fields

Field	Type	Req	Default / Source	Validation
PO # / Vendor / Date	String / FK / Date			
Linked client PO	FK (optional)		For margin tracking	
PO value / Vendor invoiced / Paid	Currency		Computed	
Status	Enum		Draft / Pending approval / Approved / Partial / Closed / Cancelled	

Actions & buttons

Button / action	Effect
+ Create vendor PO	Opens form (§3.4)

3.3 Vendor PO — detail

Screen ID: vendor-po-detail · Nav path: Payables > Vendor POs > Detail

Purpose

PO header, line items, vendor invoices received, payments made.

Fields

Field	Type	Req	Default / Source	Validation
Header strip	Read-only		PO value, Invoiced, Paid, Balance, Delivery, Terms, TDS section, Status	
Vendor invoices tab	List		All vendor invoices recorded against this PO	
Payments tab	List		Payments allocated to invoices of this PO	
Files tab	Attachments		PO copy + GRNs + vendor invoice PDFs	

Actions & buttons

Button / action	Effect
Edit	Limited editing once first invoice received
Download PO PDF	Generates and downloads
+ Record vendor invoice	Opens form (§3.6) prefilled
Cancel PO	Allowed pre-invoice; status = Cancelled

State transitions

From state	Event / trigger	To state	Side effects
Pending approval	Approver clicks Approve	Approved (Open)	PO sent to vendor
Approved	First vendor invoice	Partial	
Partial	Vendor invoiced full PO value	Fully invoiced	
Fully invoiced	All vendor invoices paid	Closed	

3.4 New Vendor PO — form

Screen ID: form-vendor-po · Nav path: Payables > + New vendor PO

Purpose

Issue a PO to a vendor; optionally link to a client PO.

Fields

Field	Type	Req	Default / Source	Validation
Vendor	FK	Y		
Linked client PO	FK (optional)		If set, margin preview rendered	
Our PO #	String		Auto PO-VN-NNNN	
PO date / Required by	Date / Date			Required-by ≥ PO date

Field	Type	Req	Default / Source	Validation
Payment terms	Enum / Custom		Inherit from vendor master	
GST treatment	Enum			Auto from state codes
TDS section (auto)	String		From vendor master; locked	
Approval workflow	Enum		Auto by amount: ≤ ₹5L auto, ≤ ₹25L manager, > ₹25L director	
Ship to	Enum		Default warehouse; supports drop-ship to client	
Line items	Editable grid	Y		≥ 1 line; per line GST% from list; "Linked client PO line" required if PO is linked
Margin preview	Computed panel		Visible only when Linked client PO set; rolls up revenue (client PO line value) vs. cost (this PO line value)	
Totals	Computed			

Actions & buttons

Button / action	Effect
Save draft	Status = Draft
Submit for approval	Routes per approval workflow; status = Pending approval
Approve & send (approver only)	Status = Approved; PDF emailed to vendor

3.5 Vendor Invoices — list

Screen ID: vendor-invoices · Nav path: Payables > Vendor Invoices

Purpose

Invoices raised on you by vendors against your POs.

Fields

Field	Type	Req	Default / Source	Validation
Vendor inv # / Date / Due	String / Date / Date			
Vendor / Our PO #	FK / FK			Both required
Taxable / GST (ITC) / Total	Currency			
Paid / TDS / Balance	Currency			
Status	Enum		Pending match / Matched / Approved / Partial / Paid / Disputed	

Actions & buttons

Button / action	Effect
+ Record vendor invoice	Opens form (§3.6)
GSTR-2B import	Periodic; auto-matches by GSTIN + invoice # + amount

3.6 Vendor Invoice — detail

Screen ID: vendor-invoice-detail · Nav path: Payables > Vendor Invoices > Detail

Purpose

Vendor invoice with 3-way match panel and payment history.

Fields

Field	Type	Req	Default / Source	Validation
Header strip	Read-only		Total, ITC eligible, TDS to deduct, Net payable	
Line items	Read-only			
3-way match panel	Read-only computation		PO ↔ GRN ↔ Invoice; tolerance per category; status pill per row	
Payments made	Sub-table			

Actions & buttons

Button / action	Effect
View attached PDF	Inline preview
Mark disputed	Status = Disputed; payment blocked; reason captured
+ Record payment	Opens Record Payment form (§3.8)

3.7 Record Vendor Invoice — form

Screen ID: form-vendor-invoice · Nav path: Payables > + New vendor invoice

Purpose

Record an invoice received from a vendor; system runs 3-way match before allowing approval.

Fields

Field	Type	Req	Default / Source	Validation
Vendor	FK	Y		
Linked vendor PO	FK	Y		Must belong to vendor; not Closed/Cancelled
Vendor invoice #	String	Y		Unique per vendor; warning on duplicate
Invoice date	Date	Y		
Due date	Date		Auto from PO terms	
GRN #	FK GRN			Required if PO line type is goods
ITC eligibility	Enum		Eligible / Blocked (S.17(5)) / Ineligible	
Reverse charge	Boolean		No	
Attach PDF	File	Y		
2B reconciliation status	Enum		Pending; auto-matched on next 2B import	
Lines (from PO)	Editable grid	Y		Per line: this-invoice qty ≤ PO qty – already-billed

Field	Type	Req	Default / Source	Validation
Totals & deduction preview	Computed		Taxable, GST, Total, TDS preview, Net payable	

Actions & buttons

Button / action	Effect
Save draft	Status = Pending match
Approve & post	Validates 3-way match within tolerance → status = Approved; ITC posted; ready to pay

State transitions

From state	Event / trigger	To state	Side effects
Pending match	3-way match passes	Matched	
Matched	Approve & post	Approved	GL posting; ITC accrued
any	Mark disputed	Disputed	Payment blocked

3.8 Vendor Payments — list

Screen ID: vendor-payments · Nav path: Payables > Vendor Payments

Purpose

All payments made to vendors with TDS deducted at source.

Fields

Field	Type	Req	Default / Source	Validation
Date / Pmt # / Vendor / Vendor inv	Date / String / FK / FK			
Mode / UTR	Enum / String			
Gross / TDS section / TDS / Net paid	Currency / Enum / Currency / Currency			

Actions & buttons

Button / action	Effect
+ Record payment	Opens form (§3.9)
Export 26Q	Generates Form 26Q TDS return CSV for the selected period

3.9 Record Vendor Payment — form

Screen ID: form-vendor-payment · Nav path: Payables > + Record payment

Purpose

Pay vendor against open invoices and/or as advance.

Fields

Field	Type	Req	Default / Source	Validation
Vendor	FK	Y		
Payment #	String		Auto PMT-YYYY-NNN	

Field	Type	Req	Default / Source	Validation
Date / Mode / Bank account / UTR	Date / Enum / FK / String			UTR required for electronic modes
Pay against	Enum	Y	€ {Invoices only, Advance only, Mix}	
Adjust against unused advance	FK Advance (optional)		Lists unadjusted advances for this vendor	
Allocations grid	Editable			Per row: Pay gross ≤ outstanding; TDS auto-computed from vendor TDS section; Net = Gross – TDS
TDS & ledger preview	Computed panel		Vendor account, Bank account, TDS Payable per section	

Actions & buttons

Button / action	Effect
Cancel	Discard
Save payment	Posts payment + allocations + TDS; reduces invoice balances; queues 26Q line

State transitions

From state	Event / trigger	To state	Side effects
Vendor invoice = Approved	Allocation made	Partial / Paid	Status auto-updates
TDS Payable accrues	7th of next month	Challan due	Dashboard alert highlighted

3.10 Vendor Advances — list

Screen ID: vendor-advances · Nav path: Payables > Vendor Advances

Purpose

Money paid to vendors before invoice is received.

Fields

Field	Type	Req	Default / Source	Validation
Date / Advance # / Vendor / Linked PO	Date / String / FK / FK			
Mode / UTR	Enum / String			
Gross paid / TDS / Adjusted / Balance	Currency		Computed	
Status	Enum		Unadjusted / Partial / Fully adjusted / Refund pending	
Aging > 90 days unadjusted	KPI		Triggers auditor flag	

Actions & buttons

Button / action	Effect
+ New advance	Opens form (§3.11)

Button / action	Effect
Row click	Shows adjustments history

3.11 Record Vendor Advance — form

Screen ID: form-vendor-advance · Nav path: Payables > + New advance

Purpose

Pay before invoice is received. TDS is deducted at the point of payment per S.51 / 194-series.

Fields

Field	Type	Req	Default / Source	Validation
Vendor	FK	Y		
Linked vendor PO (optional)	FK			If linked, advance auto-flagged for adjustment when vendor invoice posts
Advance #	String		Auto ADV-YYYY-NNN	
Date	Date	Y		≤ today
Gross amount	Currency	Y		> 0
TDS section	Enum	Y	From vendor master	
TDS amount (auto)	Currency		Gross × rate(section)	
Net paid (auto)	Currency		Gross – TDS	
Mode / UTR	Enum / String			
GST on advance?	Boolean		No (services only; pay GST on advance receipt voucher if Yes)	
Notes	String			

Actions & buttons

Button / action	Effect
Cancel	Discard
Save advance	Books advance; posts TDS to TDS-Payable; appears in Advances list

Notes

- Once an invoice is recorded, use Adjust Advance (§3.12) to net advance against invoice and TDS already paid.

3.12 Adjust Advance against Invoice — form

Screen ID: form-advance-adjust · Nav path: Payables > Adjust advance

Purpose

Net an unused vendor advance against an open vendor invoice.

Fields

Field	Type	Req	Default / Source	Validation
Vendor	FK	Y		
Advance	FK	Y	List shows only advances	

Field	Type	Req	Default / Source	Validation
			with balance > 0 for vendor	
Vendor invoice	FK	Y		Status ∈ {Approved, Partial}
Adjust amount	Currency	Y		≤ min(advance balance, invoice outstanding)
TDS treatment	Enum		Net advance TDS already paid against this invoice TDS	

Actions & buttons

Button / action	Effect
Post adjustment	Creates allocation; advance balance reduced; invoice balance reduced; TDS lines netted in 26Q workings

State transitions

From state	Event / trigger	To state	Side effects
Advance balance > 0	Adjustment posted	Advance balance reduced	Status to Partial / Fully adjusted
Invoice balance > 0	Adjustment posted	Invoice balance reduced	Status to Partial / Paid

3.13 Debit Notes — list

Screen ID: *debit-notes* · Nav path: *Payables > Debit Notes*

Purpose

Debit notes issued to vendors to reduce previously-received vendor invoices.

Fields

Field	Type	Req	Default / Source	Validation
DN # / Date	String / Date			
Vendor / Vendor invoice	FK / FK			
Reason	Enum			∈ {Purchase return, Rate correction, Short delivery, Quality reject}
Taxable reduced / GST (ITC) reversed / Total	Currency			
Status	Enum		Issued / Applied / Refunded	

Actions & buttons

Button / action	Effect
+ New debit note	Opens form (§3.14)

3.14 New Debit Note — form

Screen ID: *form-debit-note* · Nav path: *Payables > + New debit note*

Purpose

Issue a debit note to a vendor to reduce a vendor invoice.

Fields

Field	Type	Req	Default / Source	Validation
Vendor / Vendor invoice	FK / FK	Y		
DN #	String		Auto DN-VN-NNNN	
Date	Date	Y		
Reason	Enum	Y		
Reason details	String			
Lines to debit	Editable grid	Y		Per line: Debit amt ≤ original line amt – already debited
Apply to invoice balance	Enum		Yes — auto-reduce; or No — claim refund from vendor	
ITC reversal in GSTR-3B	Enum		Auto-flag for next filing	

Actions & buttons

Button / action	Effect
Save draft	Status = Draft
Issue & send to vendor	Validates → invoice balance reduced → ITC reversal queued for 3B

4. Reports

4.1 AR / AP Aging — report

Screen ID: report-aging · Nav path: Reports > Aging

Purpose

Outstanding receivables and payables bucketed by overdue days.

Fields

Field	Type	Req	Default / Source	Validation
As-of date	Date		Today	
Group by	Enum		Client / Vendor / PO / Invoice	
Buckets	Computed		0–30 / 31–60 / 61–90 / 90+ (configurable)	

Actions & buttons

Button / action	Effect
Tab AR / AP	Switches dataset
Export CSV	Server-rendered CSV

4.2 Tax Register (GST + TDS) — report

Screen ID: report-tax · Nav path: Reports > Tax Register

Purpose

Output GST, ITC, TDS deducted (vendor side), TDS suffered (client side).

Fields

Field	Type	Req	Default / Source	Validation
Period	Date range		Current month / FY / custom	
KPIs	Computed		Output GST, Input ITC, Net GST payable, TDS to deposit	
GST output register	Table		Per invoice: HSN, Taxable, CGST/SGST/IGST, Total	
TDS register	Table		Per section: vendor count, gross, rate, TDS, challan status	

Actions & buttons

Button / action	Effect
Export GSTR-1	JSON in offline tool format
Export GSTR-3B	Summary numbers per table
Export Form 26Q	TDS return for the period

4.3 PO Profitability — report

Screen ID: report-pnl · Nav path: Reports > PO Profitability

Purpose

Margin per client PO, including all linked vendor POs.

Fields

Field	Type	Req	Default / Source	Validation
Filters	Status / Client		Default = Open POs	
Per-row metrics	Computed		Revenue (client PO taxable), Vendor cost (sum of linked vendor PO taxable), Other cost, Gross margin, Margin %, Cash position	

Actions & buttons

Button / action	Effect
Export	CSV / Excel
Row click	Drill to client PO detail

Notes

- Calculation rule: Revenue = client PO taxable. Cost = Σ linked vendor PO taxable, replaced by actual vendor invoice taxable once received. Other cost = manual journal entries tagged to PO.
- Cash position = client receipts (allocated to this PO chain) – vendor payments (allocated to this PO chain), net of TDS.

5. Cross-screen state machine summary

Entity	States	Notes
Client PO	Draft → Open → Partial → Fully invoiced → Closed (or Cancelled)	Cancellation blocked once any invoice raised
Client invoice	Draft → Open → Partial → Paid → Overdue (computed) → Cancelled	Cancel blocked if any payment applied
Receipt	Draft → Posted → Allocated → Reconciled	Un-allocated remainder kept as advance
Credit note	Draft → Issued → Applied / Refunded	Reduces invoice balance; flows to GSTR-1
Vendor PO	Draft → Pending approval → Approved → Partial → Fully invoiced → Closed	Approval workflow by amount band
Vendor invoice	Pending match → Matched → Approved → Partial → Paid (or Disputed)	3-way match required for Approved
Vendor payment	Draft → Posted → Allocated	Drives 26Q queue
Vendor advance	Open → Partial → Fully adjusted (or Refund pending)	TDS netted against invoice TDS on adjustment
Debit note	Draft → Issued → Applied / Refund-claimed	ITC reversal flagged in GSTR-3B

6. Data model — high-level fields

Tables below summarise the key persistent entities. Audit fields (created_by, created_at, updated_by, updated_at, version) are present on every entity and omitted for brevity.

6.1 Client PO

Field	Type	Notes
id	UUID	PK
client_id	FK Client	
client_po_ref	String	Their PO number
our_po_no	String	PO-CL-NNNN, sequenced per FY
po_date	Date	
expected_delivery	Date	
payment_terms	String	
currency	String(3)	ISO 4217
gst_treatment	Enum	IGST / CGST_SGST / EXPORT / SEZ
place_of_supply	String(2)	State code
status	Enum	See state machine
totals_taxable, totals_gst, totals_total	Decimal(18,2)	Persisted snapshot, recomputed on line change

6.2 Client Invoice

Field	Type	Notes
id	UUID	PK
invoice_no	String	INV-CL-NNNN, sequenced per series per FY
client_po_id	FK Client PO	Required
client_id	FK Client	Denormalised from PO
invoice_date / due_date	Date / Date	
place_of_supply	String(2)	
reverse_charge	Boolean	
irn / qr_code	String	If e-invoice
status	Enum	See state machine
lines	1:N InvoiceLine	Each links to a po_line_id and carries qty, rate, taxable, gst, total
totals_*	Decimal(18,2)	
received, tds_deducted, balance	Decimal(18,2)	Computed from receipt allocations

6.3 Receipt

Field	Type	Notes
id	UUID	PK

Field	Type	Notes
receipt_no	String	RCT-YYYY-NNN
client_id	FK Client	
date / mode / bank_account_id / utr	Date / Enum / FK / String	
gross / tds / charges / net	Decimal(18,2)	
tds_section / tds_certificate_status	Enum / Enum	
allocations	1:N ReceiptAllocation	invoice_id, applied_amount
unallocated_balance	Decimal(18,2)	Σ gross – Σ allocations.applied

6.4 Vendor PO

Field	Type	Notes
id	UUID	PK
vendor_id	FK Vendor	
linked_client_po_id	FK Client PO (nullable)	Margin tracking
our_po_no	String	PO-VN-NNNN
po_date / required_by	Date / Date	
payment_terms / gst_treatment / tds_section	String / Enum / Enum	
approval_workflow / approver_id / approved_at		
lines	1:N VendorPOLine	Each may link to client_po_line_id
status, totals_*		

6.5 Vendor Invoice

Field	Type	Notes
id, vendor_invoice_no	UUID, String	Vendor's number; unique per vendor
vendor_po_id, vendor_id	FK, FK	
invoice_date / due_date	Date / Date	
grn_id	FK GRN (nullable)	
itc_eligibility	Enum	
reverse_charge	Boolean	
gstr_2b_match_status	Enum	
lines, totals, paid, tds, balance		
three_way_match_status	Enum	Pending / Matched / Failed
status	Enum	See state machine

6.6 Vendor Payment & Advance

Field	Type	Notes
payment_no / advance_no	String	PMT-/ADV-
vendor_id, date, mode, bank_account_id, utr		
gross, tds, net	Decimal(18,2)	
tds_section, tds_challan_id	Enum, FK	
allocations	1:N PaymentAllocation	vendor_invoice_id, applied
advance_adjustments	1:N AdvanceAdjustment	advance_id ↔ vendor_invoice_id, amount, tds_netted

7. Open questions & next steps

- Confirm e-invoicing turnover threshold to enable IRN generation by default (currently ₹5cr).
- Confirm approval bands for vendor PO (currently $\leq$ ₹5L auto / $\leq$ ₹25L manager / $>$ ₹25L director).
- Decide whether multi-currency POs are in scope for v1 (currently INR only assumed in computations).
- Decide bank statement import path: manual CSV upload vs. live bank API integration.
- Confirm 3-way match tolerance defaults (currently $\pm 2\%$ on amount).
- Confirm number of TDS sections to support out-of-the-box (currently 194C, 194J, 194Q, 194I, 194H).
- Decide where vendor advance ages out for auditor flagging (currently 90 days unadjusted).
